

SPOT SAFETY PROGRAM

At Weiler, we believe that **people are the most important** asset to a company. Unfortunately, we've found that many metal fabrication users haven't been effectively trained on the proper use of abrasives and power brushes, which increases the risk of lost time incidents, workers compensation claims, and employee turnover. Raising awareness of basic safety practices and thinking about safety before the job starts — and after the job is complete — can help curb accidents and injuries in the shop. That's why Weiler offers customers a safety training program based on the SPOT (Speed & Size, Pressure, Orientation, Time) methodology.

The **SPOT SAFETY TRAINING PROGRAM** is designed to educate operators on how to use abrasives and brushes safely and effectively. The program covers information on proper usage, potential hazards, and safety tips.

By completing the SPOT Safety Training Program, participants will be able to:

- ▶ Understand the basic principles of abrasive and brush safety
- ▶ Identify potential hazards before an incident occurs
- ▶ Implement safe work practices to avoid accidents and injuries

SPOT safety classroom training can be delivered on-site or virtually. If appropriate, hands-on training is also available. All trainees receive a certificate of completion.

To schedule a SPOT Safety Training, contact your local Weiler representative or visit: weilerabrasives.com/SPOT-Safety

**THINK
SPOT.**
WHEN USING ABRASIVES & BRUSHES

Work-related injuries
cost US businesses over

**\$163
BILLION**

in 2020 alone.

Abrasive safety training helps
keep co-workers safe and reduces
OSHA recordables and workers'
compensation claims.
